[Hiring Manager's Name]

[Company Name]

[Company Address]

Dear [Hiring Manager's Name / Hiring Team],

I'm writing to apply for the [Position Title] role at [Company Name]. As a final-year Computer Applications student and Certified Data Analyst, I've spent the last year building complete data and AI products end to end — not isolated exercises, but applications that clean real data, train models, and actually ship. [One line on why this company/role specifically caught your interest] I'd like to bring that same hands-on approach to your team.

During my Python Development Internship at QSkill Media / SR INDIA, I built and shipped three full data and ML applications in the space of two months: an exploratory data analysis pipeline that compared department-wise salaries and experience-vs-salary trends across a 200-record employee dataset, a Linear Regression model predicting housing prices from 15+ features and validated with RMSE and R^2 diagnostics, and a Matrix Operations desktop tool with a NumPy backend and a custom dark-themed Tkinter GUI I designed myself, complete with live shape validation. That work earned me a formal Letter of Recommendation from the company's co-founder.

Outside the internship, I keep building on my own. CardioCore is a full-stack diagnostic platform I architected from the ground up — a scikit-learn model trained on a 13-feature clinical dataset, wired to a FastAPI backend and a managed MySQL database, with a CI/CD pipeline I configured and the CORS and environment-variable issues I debugged to get it into production. I've also built a client-side data visualization dashboard that turns raw JSON datasets into interactive charts with no backend at all, and an autonomous AI agent that uses multi-step reasoning to turn a LinkedIn profile into a content strategy.

Alongside the technical work, I spent six months as Head of Management for GDG on Campus at HRIT, running event planning and workshop logistics for a 100+ member developer community. It taught me as much about coordinating people and deadlines as any project taught me about code.

I'd welcome the chance to talk about how I can contribute to [Company Name]. Thank you for your time and consideration.

Sincerely,

Kartik Tiwari
